

# QUADSCAN User's Guide

# **Door Mounted Presence sensor**

### DESCRIPTION

- 1.
- 2. clip
- 3. main connector
- 4. **DIP-switch**
- 5. range adjustment screw
- receiver 6.
- end cap 7.
- 8. clip with angle adjustment screw
- emitter 9.
- 10. push/setup button
- 11. lens cover

NOTE: BEA refers to the emitter/ receiver sensing unit within the housing as a module.

### **TECHNICAL SPECIFICATIONS**

Technology:	Active infrared with background suppression	
Detection field:	15 3/4 in. (W) x 2 3/4 in. (D) (at 6 1/2 ft. mounting height; 4 spots active)	
	400 mm (W) x 70 mm (D) (at 2 m mounting height; 4 spots active)	
Mounting height:	3 ft. 7 in. (1.1 m) to 9 ft. 10 in. (3 m)	
Range Adjustment	mechanical range adjustment screw	
Reaction time:	64 ms (typ)	
Supply voltage:	12 V - 24 V AC +/-10% ; 12 V - 30 V DC -5%/+10%	
Max current consumption:	65 mA @ 24 V AC/ 75 mA @ 24 V DC (EACH MODULE)	
Output:	2 relays (free of potential contact)	
Max. contact voltage	42 V AC/DC	
Max. contact current	1 A (resistive)	
Max. switching power	30 W (DC) / 60 VA (AC)	
Input:	1 optocoupler (free of potential contact)	
Max. contact voltage:	30 V	
Voltage threshold:	high: >10 V DC	
	low: <1 V DC	
Max. number of modules:	4 (up to 6 if 24 V DC)	
Reflectivity:	min 5% at IR-wavelength of 850 nm	
Degree of protection:	IP53	
Temperature range:	-13°F to + 131°F (-25°C to +55°C); 0-95% relative humidity, non condensing	
Norm conformity:	EMC 2004/108/EC; MD 2006/42/EC	
	EN ISO 13849-1:2008 Performance Level «c» CAT 2; EN 12978	

Specifications are subject to changes without prior notice.

Other use of this device outside it's permitted purpose cannot be guaranteed by the manufacturer.

### 3 PRECAUTIONS

- □ Shut off all power before attempting any wiring procedures.
- □ Maintain a clean & safe environment when working in public areas.
- Constantly be aware of pedestrian traffic around the door area.
- □ Always stop pedestrian traffic through the doorway when performing tests that may result in unexpected reactions by the door.
- ESD electrostatic discharge: Circuit boards are vulnerable to damage by electrostatic discharge. Before handling any board ensure you dissipate your body's charge.
- Always check placement of all wiring before powering up to insure that moving door parts will not catch any wires and cause damage to equipment.
- Ensure compliance with all applicable safety standards (i.e. ANSI A156.10 / 27 / 19) upon completion of the installation.
- DO NOT attempt any internal repair of the sensor. All repairs and/or component replacements must be performed by BEA, Inc. Unauthorized disassembly or repair:
  - 1. May jeopardize personal safety and may expose one to the risk of electrical shock.
  - 2. May adversely affect the safe and reliable performance of the product and will result in a voided product warranty.

### 4 MOUNTING THE HOUSING

- Take into account the position of the white clips before drilling and fastening the screws.
- Mount the housing as close as possible to the leading edge. Leave 3/4 inch (2cm) for installation of the black end caps.
- If installing the housing on each side of the door carefully locate and drill a wire passage hole thru the housing, door and opposing housing.

### 5 PREPARING THE WIRING

Pass the cable through the flexible wire sheath and snap off only one of the precut part of the end cap. Caution, end caps are handed.

Pre-cut snap out for flexible wire sheath. (Wire sheath not shown)

Drill 3 holes in the fixed part of the door frame. Pass the cable through the hole in the middle and fasten the flexible wire sheath using the two screws.

1/2"(12mm) for wire passage

### 6 ORIENTATION AND POSITION OF THE MODULE(S)

Slave cable connects between any module.

Module with the power cable connected to the door control becomes the master module.

Ensure to properly connect the correct plug connector into its respective location. If a plug option doesn't exist at your control, simply cut off the plug and hardwire at the control end.

## 8 WIRING AND RELAY CONFIGURATION

WIRE COLOR	DESIGNATION	FUNCTION	CONNECTIONS	
RED	POWER	INPUT	POWER SOURCE	
BLACK	POWER	12 - 24 VAC/DC		
WHITE	COM.		CONNECT TO ACTIVATION INPUT OF DOOR CONTROL	
GREEN	N.O.	APPROACH SIDE GREEN		
YELLOW	N.C.	LED		
WHITE/BLACK	COM.		CONNECT TO SAFETY/STALL INPUT OF DOOR CONTROL	
GREEN/BLACK	N.O.	SAFETY SIDE RED LED		
YELLOW/BLACK	N.C.			
BLUE	MONITOR/TEST (+)	EXTERNAL MONITORING	CONNECT TO MONITORING INPUT OF DOOR CONTROL	
BROWN	MONITOR/TEST (-)			
Plug the SLAVE CABLE between the modules in one of the two plug in connectors. The module connected to the door controller becomes the MASTER.				

### SETTINGS

	DOOR SIDE	FREQUENCY	BACKGROUND (BACKGND)	UNCOVERED ZONE
	ON RELAY 1 (S) SAFETY SIDE	FREQ 1 (F1)	ON	н
	OFF RELAY 2 (A) OFF APPROACH SIDE	FREQ 2 (F2)	OFF	L
FACTORY	Dip Switch 1	2	3	4
VALUE	LED during detection R1 = RED R2 = GREEN	Set different frequencies on modules close to each other.	For low reflective floors it is recommended to turn off Background.	Factory defaulted to detect a 28 inch minimum high person.

Notes:

<u>Dip Switch 2:</u> Frequency 1 or 2 is not specific for the safety or approach side. 2 modules within the same housing must be set to different frequencies.

#### Dip Switch 3:

In rare occasions with low background reflectivitey it may be desirable to change dip switch 3.

#### Dip Switch 4:

In most cased it's not necessary to change dip switch 4. When mounting above 8ft it may be desirable to change dip switch 4.

After changing a DIP-switch, the orange LED flashes.

Next Perform a LONG *(approx. 3 sec.)* push on the MASTER push button as this confirms the settings of ALL MODULES.

Afterwards, a number of green flashes (x) indicates the number of connected modules.

<u>Note:</u> A long push on a slave module will only confirm its settings.

## 10 SETUP (MANUAL SETUP RECOMMENDED)

During any set up (via the flashing red/green LED), 101 ensure to remove all object within the detectin zone and do not stand in the field during set up! Step 1: A SHORT push on the button of the MASTER launches a setup on ALL MODULES OF THE GIVEN DOOR. When the LED is off on all modules, set up is successfull. Proceed to the next section. If any LED is on proceed to step 2. RED-OFF GREEN Step 2: If setup is not successfull: based on each module(s) LED flashing rate and color, follow step 3 after reading the important Note: note to the right. Slowly turning the adjustment Step 3: GREEN Next to the dip switches; slowly turn the adjustment screw screw increases the flashing clockwise to increase the range. speed of the LED when approaching the optimal RED Next to the dip switches; slowly turn the screw position. Once at the optimal counterclockwise to decrease the range. position, the sensor will automatically launch a new ORANGE Step out of the detection field. setup via the flashing  $\bigcirc_{4}$ If necessary, change angle or see troubleshooting section 13. red/green LED. ORANGE Launch a new setup. See troubleshooting section 13.  $\bigcirc_5$ 

## 1 MODULE ANGLE ADJUSTMENTS

Test if door and sensor function correctly. Ensure the swing side will slow/stop the door and the approach side will activate/re-activate the door.

If necessary, use spotfinder to adjust IR spots closer to or away from the door face and relaunch a setup as described in step 10. Walk test to ensure compliance to ANSI 156.10.

## 12 INSTALLING THE LENS COVER

After adjustment, you can fasten the lens and end caps. To fasten the lens correctly, position the curved side at the bottom and snap the top into place. Install the end caps (shown on page 2) using the supplied screws.

13	TROUBLESHOOTING (LED SIGNALS)			
	LED	Probable Cause	Corrective Action	
	The RED or GREEN LED is ON sporadicly.	Incorrect adjustment	1 Launch a new set up.	
$\bigcirc$	The RED or GREEN LED is ON permanently.	Incorrect adjustment of the uncovered zone.	1 Launch a new setup.	
$\bigcirc$	The ORANGE LED is on permanently.	The sensor signals an internal fault.	1 Replace module(s).	
×	The ORANGE LED flashes quickly.	DIP-switch setting awaiting confirmation.	Corfirm the DIP-switch setting: long push on the push button.	
<b>0</b> 1	The ORANGE LED flashes 1 x every 3 seconds.	The sensor signals an internal fault.	<ol> <li>Cut and restore power supply.</li> <li>If orange LED flashes again, replace sensor.</li> </ol>	
- <mark>-</mark> 2	The ORANGE LED flashes 2 x every 3 seconds.	Voltage over or under specification.	<ol> <li>Check power supply.</li> <li>Faulty or incorrect power supply.</li> <li>Replace cable</li> </ol>	

13	TROUBLESHOOTING CONTINUED (LED SIGNALS)			
	LED	Probable Cause		Corrective Action
<mark>-</mark> ∽₃	The ORANGE LED flashes 3 x every 3 seconds.	Communication error between modules.	1 2	Check wiring between modules. Launch a module count: long push on push button of MASTER module.
<b>.</b>	The ORANGE LED flashes 4 x every 3 seconds.	The sensor does not receive enough IR-energy.	1 2 3 4	Step out of the detection zone. Launch a new set up. Change angle of the module. Switch off background.
<b>○</b> <sub>5</sub>	The ORANGE LED flashes 5 x every 3 seconds.	The sensor receives too much IR-energy. IR saturation Set up error	1 2 3	Launch a new set up. Check mounting height. Adjust range or angle of module. Cut and restore power. - Launch a new set up.(If Orange LED flashes again replace module).
$\diamond$	The ORANGE LED flickers.	The sensor is disturbed by lighting or another sensor.	1	Select a different frequecy for each module (DIP 2).Launch a new set up.

## 4 ACCESSORIES

## ANSI/AAADM COMPLIANCE

# **ANSI / AAADM Compliance**

Upon finishing the installation and/or service work perform at a minimum a daily safety check in accordance with the minimum inspection guidelines provided by AAADM. Provide each owner with an owner's manual that includes a daily safety checklist and contains at a minimum the information recommended by AAADM. Offer a familiarization session with the owner explaining how to do daily inspections and calling out location of cutoff switches to put equipment out of service if a deficiency is noted. The equipment should be inspected in accordance with the minimum inspection guidelines annually. A safety check that includes at a minimum the items listed on the safety information label must be performed during each service call. If you are not an AAADM certified inspector BEA strongly recommends to have an AAADM certified inspector perform an AAADM inspection and placing a valid inspection sticker below the safety information label prior to placing the equipment into operation.

## 16 COMPANY CONTACT

Do not leave problems unresolved. If a satisfactory solution cannot be achieved after troubleshooting a problem, please call BEA, Inc. If you must wait for the following workday to call BEA, leave the door inoperable until satisfactory repairs can be made. Never sacrifice the safe operation of the automatic A HALMA COMPANY door or gate for an incomplete solution.

Our Service Technicians can be called 24 hours a day, 7 days a week. For more information visit www.beasensors.com.
